- + Added advertisements based on category to the article view
- + Added a sort function to be able to sort the news based on publishing date
- * Changed structure of the code, implemented an object oriented design
- * Changed the text writing function to be more general and work on the Set-top-box
- * Changed structure of the code, implemented an object oriented design

Bugs

- Fixed bug in navigation between articles by adding missing ' " '(quote) in the technology xml-file.
- Fixed bug with loadpng() on box by changing the resolution of the images fixed the problem
- Fixed bug with category highlight disappearing by rewriting the category highlight in function on_input in main controller when a number on the remote is pressed.

Changes in user experience

- * Changed the graphical user interface to make the user experience better and easier to implement with other components.

Iteration 3: application version 1.0

Changes

- + Added possibility to switch between feeds (categories)
- + Made it possible to show more than nine headlines by adding a multiple page function.
- + Added arrows to the background to show if there is more news to the left or to the right.
- + Added a download function which fetches news from the server.
- + Added a help-image that explains the navigation.
- * Changed the font and color of the text.
- * Changed the highlight in the main view to a more appealing one.

Bugs

- Fixed bug where the navigation continued even if there wasn't a headline at that position by adding a function that checks if the headline exists.
- Fixed bug in text printer where the printer prints a 'PZ' when it was supposed to print a 'P'
- Fixed bug for not being able to move to the right or down in the feed navigation by changing function has_news() in main_controller.
- Fixed bug where the word was cut if it didn't fit in the remaining line by adding function to text printer.
- Fixed bug in navigation back to main view from article view by making it handle multiple pages.
