Updates

Sprint	Version	Date	Modification	Person in charge	Verified by
1	1.0	2014-10-15	First version of the manual - corresponds to the working prototype of app 3	Vendela Palmberg	Jessie Chen
	1.1	2014-11-04	Updated to the latest version of the app	Vendela Palmberg	Ylva Johannson
2	1.2	2014-11-18	Updated to the latest version of the app.	Vendela Palmberg	Guanqun Li
3	1.9	2014-12-03	Updated manual to correspond to latest version of the app. Added information about the categories	Vendela Palmberg	Guanqun Li
	2.0	2014-12-09	Update after inspection	Vendela Palmberg	Jakob Boman

Introduction

Tap Interactive's newsfeed application FeedMe provides an easy way to access and read news from your TV. It offers a pleasant browsing and reading experience where the content is in focus. The articles are short with around 170 words to make the reading quicker and gives the user an overview of what is happening in the world.

FeedMe consists of four different categories; world news, sport, technology and economy. The user can view a mix of the most recent news from all categories or choose to only look at news from a certain category.

System requirements

The application can be run on the Zenterio iOS (Set-top-box) as well as in a emulator created with the Löve engine.
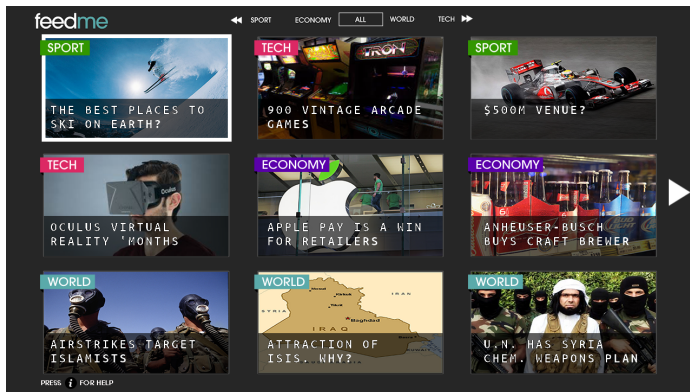

Using the News feed application

The application consists of two views, a main view that shows the headline of the most recent news and an article view where the user can read the entire article. The article view is accessed from the main view. A user can also filter the articles by category. The image below shows an explanation of what each button on the remote does, which will be explained more thoroughly in the following sections.

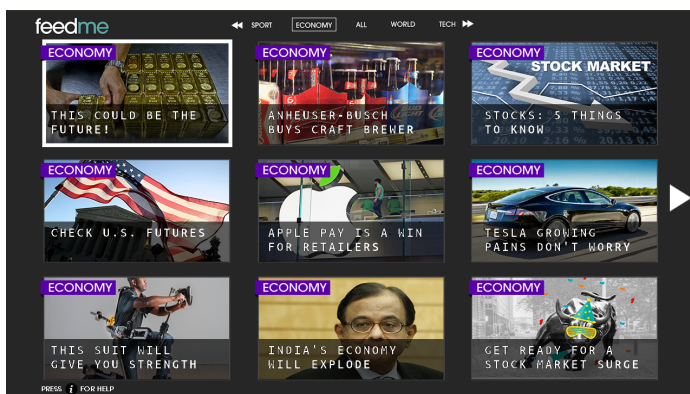

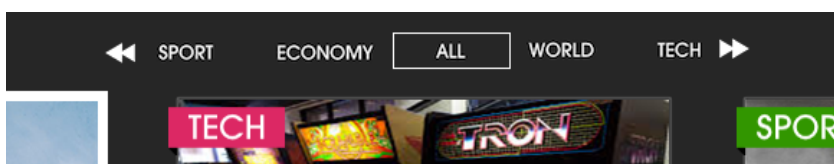

Navigation in main view

Use the up- arrow, down-arrow, left-arrow or right-arrow button to navigate between the headlines. It is also possible to take a "shortcut" to a certain headline by pressing a number on the number pad. This number corresponds to the position of the headline in the 3x3 grid. To open the highlighted article press OK on the remote.
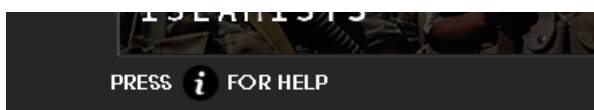

To access more news in the news feed simply navigate to the rightmost headlines and press the right-arrow button again, new headlines will then appear. To show the previous headlines go to the leftmost article and press the left-arrow button. (If the arrow isn't showing and it's not possible to go further in that direction it means that there are no more articles in that direction).

There is two ways to switch between the categories. The first way is to use the buttons forward and rewind to switch between the feeds. It is also possible to switch category by navigating to the top row of the headlines and then press the up-arrow again. The current feed in the top of the screen will then be highlighted. It is then possible to navigate between the feeds by moving left and right with the arrow button. To return to the headline navigation simply press the down-arrow button.

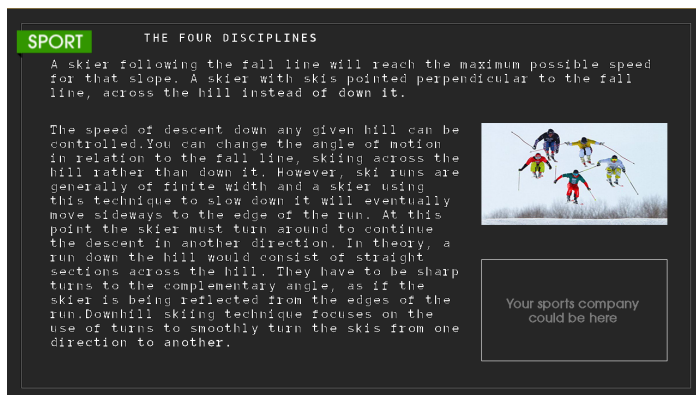

To quickly go to the start page, a.k.a. the first page in the all- feed, press menu button. The info button (i on the remote) shows an image (similar to the image of the remote in section 3.) of what each button do.

Navigation in article view

Use buttons left-arrow and right-arrow to switch between articles in the article view. To go back to the main feed press the menu button on the remote.

Navigation on Löve engine

The navigation on the Löve engine emulation works in the same way as on the Set-top-box but with buttons on the computer keyboard instead of the Set-Top-Box remote. The key corresponding to the Set-top-box remote button is listed in the table below.

Set-Top-Box remote	Computer keyboard
Up, down, left, right arrows	Up, down, left, right arrows
Number 1-9	Number 1-9
OK	n
menu	m
rewind	tab
forward	f
i	i
